Summary

Third-year Computer Science student specializing in AI-powered applications and full-stack development, with hands-on experience training language models from scratch in PyTorch, building production-ready SaaS platforms, and deploying containerized web applications.

Education

Amrita Vishwa Vidyapeetham, Ettimadai 2024 – 2028
B.Tech in Computer Science Engineering *CGPA: 9.22*

PSBB Learning Leadership Academy, Bengaluru
Class XII: 92% *2024*
Class X: 89.4% *2022*

Experience

Acceleron Labs April 2026 – May 2026
AI Project Intern

- Built a transformer-based large language model from scratch in PyTorch, implementing the tokenization, attention, and training loop components without relying on pre-built model libraries
- Trained the model end-to-end on the company's on-premise GPU server, managing data preparation, checkpointing, and hyperparameter tuning across training runs
- Achieved satisfactory generation quality on internal evaluation, delivering a working baseline model and training pipeline for the team to extend

Projects

Converso – AI-Powered SaaS Learning Platform **GitHub**
Next.js 15, TypeScript, Supabase, Vapi AI, Clerk, Stripe, Tailwind CSS, Sentry

- Built a full-stack SaaS platform enabling real-time voice-based AI tutoring across multiple subjects using Vapi AI and 11Labs speech synthesis
- Designed a secure PostgreSQL backend on Supabase with Row-Level Security for session history, user data, and companion metadata
- Implemented multi-tier subscription monetization using Clerk Billing and Stripe with feature gating and automated payment processing
- Ensured production reliability via Sentry error monitoring and custom middleware for protected route management

PayAware – AI-Powered Personal Finance Dashboard **GitHub**
Next.js 15, Supabase, Vapi AI, Google Gemini, Razorpay, Docker

- Developed an awareness-first finance dashboard with voice-based expense and income logging via Vapi AI, built for Build2Break Hackathon at Amrita
- Integrated Google Gemini to generate explainable spending summaries and income-vs-expense trend insights from user data
- Enabled secure UPI payment link generation via Razorpay with mandatory manual user confirmation, avoiding automated transactions
- Containerized the full application using Docker for consistent builds and single-command deployment

Technical Skills

Languages:	Python, Java, C, C++, JavaScript, Haskell
Frameworks & Web:	Next.js, Django, TypeScript, HTML/CSS
AI / ML:	PyTorch, Machine Learning, Deep Learning, Computer Vision, LLMs
Tools & Platforms:	Git, Docker, Supabase, Jupyter Notebook, Arduino
Core CS:	Data Structures & Algorithms, DBMS, Computer Networking (CCNA)

Achievements & Activities

- Build2Break Hackathon (2025), Amrita Vishwa Vidyapeetham – Built and presented PayAware as part of a team
- Completed 5 CodeChef Monday Munch DSA Challenges, with consistent competitive programming engagement

Certifications

- CCNA – Cisco Networking Academy: ITN, SRWE and ENSA modules completed 2026
- Machine Learning Specialization (5 Courses) – DeepLearning.AI / Coursera 2025
- CS50's Introduction to AI with Python – Harvard / edX 2025

Areas of Interest

AI Applications — Full-Stack Development — SaaS Platforms — Voice AI & Intelligent Systems
